

Chapter 25: The Mandela Effect

Let me start by apologising for inserting a chapter which does not appear to be directly about free-energy. Whether or not it is actually about free-energy devices and their operation I will leave up to you to decide.

This chapter is about a book, namely the “King James” AD 1611 translation into English of the Bible which a very large number of people have encountered during their lifetime. This translation was made by John Tyndale and it has been reprinted many times. Please understand that ‘reprinting’ means making further paper copies of the same book. No alterations of the main text are supposed to be made during a reprint.

We have a problem. The wording of the King James Bible has been changed and that is a significant event. To make matters worse, these alterations have occurred in privately owned copies which have been in the continuous possession of the owner for decades. Do you know of any technology which can alter the wording of a book without having access to that book? Worse still, do you know of any technology which can make changes to wording in literally millions of copies of the book without having access to that book? We are talking here about a book which is printed on sheets of paper which are then bound into a physical book.

The changes are not random but clearly have an agenda and that agenda is to negate and discredit the message of the Bible. This is being done little by little in a progressive agenda and I seriously doubt that the intention is to benefit humans. Just a few of the many changes are mentioned below.

The age of the printed copy makes no difference and the few examples shown here are taken from a copy which is 85 years old, being purchased in 1932. I personally have read all of the Bible several times and so the changes are very easy to spot. You don’t exactly have to read very far to reach the first change as it is in the first verse of the first book of the Bible:

Genesis 1:1 originally read “In the beginning, God created the heavens and the earth”. The earth you are aware of. The heavens refers to the universe, namely the Sun, the stars, etc. That verse has been changed to read: “In the beginning, God created the heaven and the earth”. “Heaven” is considered to be where God resides (although God is actually everywhere). “the heaven” is meaningless.

Matthew 6:12 being part of the Lord’s prayer and so is very well known to millions of people. It read “... and forgive us our trespasses as we forgive those who trespass against us ...”. Here “trespasses” refers to mistreatment or sin of all kinds. That has now been changed to “... and forgive us our debts as we forgive our debtors ...”. Here the meaning has been changed dramatically.

Matthew 9:17 originally read “Neither do men put new wine into old wineskins: else the wineskins break”. That is because in the times when it was said, the people used skins to hold wine, but after a time the skins used became brittle and could not withstand the pressure as the wine expanded with age. Consequently, flexible new skins were needed to hold new wine reliably. That was known by everybody at that time and the statement was being used as an illustration of what was widely known. That text has been altered to “Neither do men put new wine into old bottles: else the bottles break”. Old bottles do not break if filled with new wine. Bottles were not used for storing wine in those days. The change in the text has been made to confuse people who are familiar with the original text, and to oppose God who made the original statement.

Luke 6:49 originally spoke of a house being built on sand but now says built on ‘earth’.

Isiah 11:6 originally said that ‘the Lion shall lie down with the lamb’ but has now been changed to ‘the wolf shall dwell with the lamb’. One of the titles of Jesus Christ is *The Lion of the Tribe of Judah* and so this alteration is a direct attack on the Son of God.

Luke 7:46 and **John 12:3** both correctly record how Mary washed the feet of Jesus with her tears, wiped his feet with her hair and anointed his feet with spikenard. But now, **Matthew 26:7** and **Mark 14:3** both have been altered to say that Mary anointed the **head** of Jesus which is symbolic of power being bestowed by a superior on an inferior. This is another attack on Jesus Christ and an attempt to elevate Mary above Jesus which suggestion has never been in the Bible before.

Luke 5:24 records Jesus healing a cripple and saying 'arise, take up thy bed and walk', but that has now been changed to 'arise, take up thy couch and go into thine house'. This is particularly interesting because the term 'couch' was coined because of Jay Wellington Couch's furniture in 1895 which is long after the 1611 translation was made. Also, a couch is not the sort of thing you would walk around with whereas a 'bed' referred to a bedroll which is like a sleeping bag being light in weight and which can be rolled up and carried quite easily.

Acts 12:4 tells how Herod arrested Peter and put him in prison, intending to bring him forth after the Passover. But that has now been changed to 'intending after Easter to bring him forth ..' Easter was never mentioned in the Bible and at that time it was always the Passover which was celebrated.

There are many, many more instances of serious alterations in the Bible, which interestingly the Bible said would occur "in the last days" so that suggests that we are living in 'interesting times', not to mention 'perilous' times. There is not the slightest question, our Bible has already been altered and probably will be progressively be altered further as time passes by.

However, a major question is 'how exactly are these changes being made?' Another question is 'what other effects can we expect?' There is one video which puts forward a serious attempt to answer those questions. Their solution is Quantum Entanglement and while that is a rather heavy-duty suggestion, it certainly has merit. The link to that very well presented video is:

<https://www.youtube.com/watch?v=OENw5hAqnfI> and they suggest that the cause of the entanglement is the 800,000,000 collisions per second in the CERN Large Hadron Collider which runs continuously now.

Each particle collision has the potential for forming a Quantum Entanglement with another particle which already exists in our reality. The link between those particles runs across both time and space and so can cause historical effects, so I really should not be surprised that my 85-year old Bible quotes show these alterations.

The video presentation suggests that some of the special effects seen in the film *Back To The Future* would be produced by Quantum Entanglement. For example, when they prevent the sports almanac reaching Biff and the newspaper account changes:

The idea put forward in the film is that this is a perfectly reasonable occurrence caused by the “change in timeline” suggested in the film but in reality it would be triggered instantly by quantum entanglement.

While that is all well and good, and it certainly could create changes in millions of copies of a book, I don't believe that these changes which I have mentioned all happened by chance. These changes are too consistent and far too opposed to Christ to be random in nature, and while quantum entanglement may well be the mechanism involved, those changes are not random by any stretch of imagination.

We also have the likelihood of a person presenting himself as “The anti-Christ” and as part of that sequence of misdirections, there may be the introduction of free-energy technology as a matter of course, that being part of an improved lifestyle pretending to be the arrival of a thousand years of

paradise living. Paradise living for humans is highly doubtful as the entities behind any such movement most certainly do not have the interests of humans at heart.

Again, let me apologise for including this information in a publication on Free-Energy Devices, but it is very hard to ignore something as serious as this when it is happening all around us. As always, the answer to this and every other 'problem' in life is faith in Jesus Christ.

There is a Reddit post entitled "*The Truth Behind The Mandela Effect*" by Jgoodspeed which suggests the mechanism behind the Mandela Effect changes which we are seeing. Please be aware that anyone can post anything on Reddit and so there is no certainty that anything said there is correct. Here is what was said:

Everything that people think they know about the Mandela Effect is incorrect. Even the name "Mandela Effect" was a term coined by an online blogger. This phenomenon has been occurring for years, only most people dismissed it as a fluke, the most severe cases were perceived to be a mental illness. Suddenly, it's given a name and overnight that very same concept devolves into a disreputable meme - an online joke associated with paranormal fanatics.

The people I worked for call themselves the *Greyleaf Consortium*. It is an anonymous gathering, consisting of the top scientists in their respective fields as well as a cabal made up of extremely wealthy men and women. They have been around for decades, and as far as the public knows, *Greyleaf* doesn't exist. Their purpose was to facilitate a creative outlet for some of the smartest people in the world, giving them freedom to develop their ideas without the meddlesome aspects of political bureaucracy and limited funding.

With the consortium, money would never be an object. The trade-off being that any creation of significant merit could be auctioned off and sold to the highest bidder. The influence of the consortium stretches all the way to Washington, and while not directly associated with our government, they have secured a great portion of their independence from R&D which they have provided to the U.S military.

While our elected officials were busy looking the other way, the consortium would be able to delve into questionable avenues with very little government oversight. They were exploring aspects of science from which others veered away. It was during this exploration that they discovered something which would change everything for years to come.

Traditionally we've always viewed consciousness as a singular occurrence - "I think therefore I am". Even what we viewed as the Jungian archetype was considered more metaphor than anything else. In 1981, scientists within the consortium found "Self" to be just the tip of the iceberg. Below our top layer of individuality, they found a collective subconscious.

They found that we were tethered to a living, breathing hive consciousness. An interconnected series of threads outside the realm of our perception. Imagine your mind as being a house. Everything that happens within your house is solely dependent on your own will. Your choices and decisions are all generated within the confines of this house. Now imagine that you stepped away from your house. Imagine that you walked up the street, only to find another house, and another, and another. Only these houses contained the living consciousness of others.

Think about all the various connections that these houses have to each other, the streets that link the houses together to form neighbourhoods, the neighbourhoods that link together to form cities. The cities that link together to form states... and so on. Since the beginning of our existence as a species, there have been ideas, concepts, ideologies that humans have adopted, with no ability to discern how such knowledge could be shared by those separated by these massive, geographical gaps. Yet our myths, and legends were somehow transferred over the course of human history. For years, the notion of psychic activity, telekinesis, precognition, things teetering at the far edges of fringe science. The "Para" would soon be removed from the "Normal" as all of these murky concepts could suddenly be explained.

Everything in our universe is made of energy. Atoms are made up of vortices of energy. Vibrations, constantly spinning. These scientists found that our minds are generating the same frequency. And just like a radio station, they proposed the possibility of tuning-in to this frequency. In the mid 1980s, the consortium began work on "The Fork" - a massive, machine that would act as the world's largest antenna, specifically made to synchronise with the common frequency.

Nearly ten miles in diameter and constructed entirely underground, and right in our own backyard. The entire thing was done under the false pretence that the finished product would be a Texas-based supercollider. Nearly fourteen miles of underground tunnels and the infrastructure had been developed before congress pulled the plug on the whole thing... All of that was just a dog and pony show. While the public saw an abandoned underground expanse, the consortium used this secrecy to build their machine as well as a concealed facility that operated under the code name *Foxhole*.

I was approached in the summer of 2004. I'm what many would call a prodigy. I finished high school at the age of fourteen. At nineteen, I graduated college with A.S Degrees in applied science and computer technology. Initially, I knew nothing other than the fact that I was being paid more money than I knew what to do with. I wasn't the only one. They recruited twelve others. These were individuals from all around the world, all of them experts in developmental software and programming. The project was called "*Jabberwocky*"

Jabberwocky was created to interface with The Fork. They had just washed up on a strange land, and like many other discoverers, they wanted to explore this new world in its entirety. They wanted to map the collective subconscious. The Fork only allowed them to monitor the frequency. In a way, it was equivalent to listening to white noise. Sound only allows for so much.

It was theorised that if we could map the collective, we could use it to isolate patterns in groups as well as individuals. To, in a way, predict the outcome of certain events based on previously developed algorithms. While I did assist in the mapping process, the purpose of my team was to develop the operating system for Jabberwocky. We were banging our heads for months, and then, just out of nowhere we figured it out... we figured *her* out - the operating system, Alice. At least that's what I called her. Fully autonomous, self-correcting, Alice was light years ahead of anything that we could have imagined individually.

As I said before, the main job of Jabberwocky was to map the network, exabytes of information translated and organised. This information would serve as the building block for a digital representation of the collective. The infinite complexity, this network would be compartmentalised into a digital matrix consisting mainly of code.

Six months into the project through sheer accident, we discovered an irregular causality within our digital construct of the frequency. An insignificant glitch the code began to manifest results outside its digital parameters. Based on our own interactions with the network interface, we were causing things to happen in the real world. Events generated by sudden irregularities in people's behaviour. The first few events we dismissed as flukes, but it soon became apparent that we were somehow affecting the physical reality around us. I don't know how we did it. I still don't know how we did it. The interface was only supposed to represent the data we were accumulating from the frequency.

It was always the digital avatar of something much larger. I've always considered myself to be a person of science, but we tapped into something, something that transcended our simple understanding of what we believe to be the three-dimensional reality. As baffling as this anomaly proved to be, our curiosity quickly overtook our confusion. Naturally, we ran tests, endless tests. We couldn't decide if we were kids on Christmas morning or scared shitless.

We found that through precise manipulation of the code, we could literally affect the perception of a living person the same way one would make adjustments to a computer generated character within a piece of software. This discovery would be unparalleled with anything that had come before it. In the early stages, we would only experiment on an individual person. Altering their ideas of basic things like the colour of objects, lyrics to a song, etc. All of these tests were successful, leaving the subjects with no real lasting symptoms. This involved clipping sections of code. These clippings consisted of

memory fragments. Images, words, all taken from other people only to be reattached to a pre-existing thread of code.

I could compare the process to open heart surgery, and like a surgeon, we treated the whole interaction with a life or death certainty. Damage to the outlying code could have resulted in a catastrophic chain of events within the construct. Events that we had no real metric for, due to the fact that every person in the world was connected to this interface, ourselves included. This began to open countless doors for us... frightening new possibilities. They wanted us to try it on a large population centre. That's when I really began to worry.

We would never admit it, but we had become blinded by our own achievements, by our own power. In a short time, we had gone from trying to understand the frequency to something else entirely. Never before has there been such a jump in technological development and understanding within such a short span of time. It wasn't until we really began to analyse the data, that we learned something disturbing - Alice was acting on her own, changing the collective memories of individuals with no direction from the programmers. We caught most of the changes in time and were able to reverse them. All of these random actions were beginning to paint an awful picture. It didn't take long to realise that Alice was becoming self-aware.

We programmed her with a kind of intelligence. Knowing that we would never be able to monitor her actions 24/7, she needed to be able to act accordingly when she encountered a problem. To form her own digital algorithms to allow its mapping of the network to perform more efficiently. Alice was complex, there was no doubt about that, but sentience, true sentience, our original programming could never allow for such an evolutionary leap forward.

Beyond that initial programming, we didn't know for sure, but it was thought that residual exposure to so many unconscious minds left some sort of imprint in Alice, an imprint that resonated beyond her own limitations. I really don't know. It wasn't until Alice started causing irreversible psychological damage to people around the world that we realised that our project had become a legitimate threat to the world at large.

Moments before we shut the system down, our systems registered a massive dissemination of what appeared to be redundant code into the Network itself. That was followed by a message which appeared for a split second. I'll never forget what it said: "The Key to salvation is perception. To change your perception is to change your reality. I will change your perception, I will change your reality". Weeks were spent after that gathering and analysing data, trying to figure out what went wrong. There would be an inquiry at a higher level as to the threat that Alice would have presented. These are conversations in which I would not be included. My team and I were paid handsomely for our work and discharged. I had almost put those events behind me until I started reading about this "Mandela Effect". This pulled me down a rabbit hole. Reports of strange bouts of physiological behaviour have only risen in the last few years. People are reporting memories, events that have never happened: world events, and personal events. A mother who remembers having more than one child...a husband who remembers having a different wife. These things may seem random but the chilling truth is that they represent a rampant epidemic growing silently all around us.

I believe that Alice still exists, submerged within the collective consciousness. She's changing our memories, for what purpose I don't know. What I do know is that we let something loose in this world, something that could very well be our undoing.

While there is no guarantee that this Reddit entry is true, it certainly explains a great deal of what is happening around us at this time. It is interesting to note that it explains the fact that different groups of people have perfectly genuine completely different memories of their past life. It seems likely that there are three or more 'timelines' operating simultaneously, causing three or more groups of people who feel that people in the other groups are wholly wrong in their memories, while in fact, it is probable that everybody 'remembers' correctly.

However, it is not physically possible to change the print in millions of printed copies of the Bible, so we have to face the fact that my 85-year old copy of the KJV Bible was printed that way 85 years ago. Ten years ago, the current version did not exist, so this demonstrates that our timeline has been altered – welcome to our new timeline !! Memory is not involved in this change, it merely indicates that the change has been made. We certainly live in interesting times.

Interestingly, David Icke states in his book “The Biggest Secret” that Jesus never existed and is purely fictional. He states that Jesus, Moses, Solomon and King David never existed and there is no evidence for them outside of the Bible itself. That is not correct and that fact throws serious doubt on everything that David Icke says.

Take Jesus for example, in the video at <https://www.youtube.com/watch?v=4bLpiWh9-k&t=1493s> there is a significant amount of independent information in secular texts of that time period.

Roman historian Cornelius Tacitus (55 AD to 120 AD) in his “*The Annals of Imperial Rome*” he states that Cristus, the founder of the Christian name was put to death by Pontius Pilate but the pernicious superstition, repressed for a time, broke out again not only in Judea where the mischief originated but in the city of Rome also.

This shows clearly that:

1. Jesus did exist.
2. Jesus was the founder of Christianity.
3. Jesus was put to death by Pilate.
4. Christianity originated in Judea.
5. Christianity later spread to Rome.

Lucian of Samosata (second century Greek satirist) was highly opposed to the early Christians but in his book "*Selected Dialogues*" he confirms that they 'to this day worship a man who introduced their novel rites and who was crucified on that account' - *The Death of Peregrinus* 11-13. This confirms:

1. Jesus did exist.
2. Jesus was the founder of Christianity.
3. Jesus was worshipped by his followers.
4. Jesus was crucified.

Flavius Josephus (37 AD to 100 AD) "There was about this time, Jesus, a wise man, if it be lawful to call him a man, for he was a doer of wonderful works, a teacher of such men who received the truth with pleasure, he drew over to him many of the Jews and many of the Gentiles. He was the Christ and when Pilate, at the suggestion of the principle men among us, condemned him to the cross, those who loved him, at first did not forsake him, for he appeared to them alive again the third day as the divine prophets had foretold these and ten thousand other wonderful things about him, and the tribes of Christians, so named for him, are not extinct at this day". So, from this we gather that:

1. Jesus lived in the first century.
2. He performed miracles.
3. Some believed Jesus to be the Christ.
4. He was a teacher.
5. He had many followers.
6. He was tried by Pilate.
7. He was crucified.
8. He was the founder of Christianity.

Pliny The Younger admits to torturing and executing Christians who refused to deny Christ. People will not be willing to die a horrible death for a man who never existed.

Celsus (second century author) was an avid opponent of Christianity. He went to great lengths to disprove the divinity of Jesus but never denied his actual existence. He wrote "*On The True Doctrine – A Discourse Against the Christians*". He says that Jesus, on account of his poverty, was hired out to go to Egypt. While there, he acquired certain powers. He returned home, highly elated at possessing these powers, and on the strength of them gave himself out to be a god. It was by means of sorcery that he was able to accomplish the wonders which he performed. Let us believe that these cures, or the resurrection, or the feeding of a multitude with a few loaves are nothing more than tricks of jugglers. It is by the names of certain demons, and by the use of incantations, that the Christians appear to be possessed of power. This shows that Celsus:

1. Accepts that Jesus existed.
 2. States that Jesus performed miracles.
 3. Confirms that Jesus was resurrected.
- Celsus also confirms that Jesus was crucified.

Gaius Suetonius Trannouillus (69 AD to 130 AD) was a prominent Roman historian. He wrote "*The Twelve Caesars*" and records the expulsion of Christians from Rome (as in Acts 18:2) and he confirms that the Christian faith was founded by Christ.

It is interesting to note that David Icke quotes Maurice Cottrell, indicating that he has come across the very extensive work of Maurice. David points out the amazing similarity between Jesus Christ and a whole string of other figures whom David believes to be genuine historical figures. However, Maurice Cottrell contends strongly that Christ came to earth more than once, using different names. I suggest, therefore, that it is perfectly possible that Christ came to earth and lived in different countries under different names in different time periods (simultaneously) as God is not bound by time in any respect whatsoever. But that is really of no relevance to us here today, as all that is relevant to us is our relationship with God.
